Targeting the Lymph Nodes to Orchestrate Anti-tumor Immunity

Peter DeMuth, PhD, Chief Scientific Officer

Koch Institute Symposia: Cancer Vaccines

June 23, 2023

Forward Looking Statement

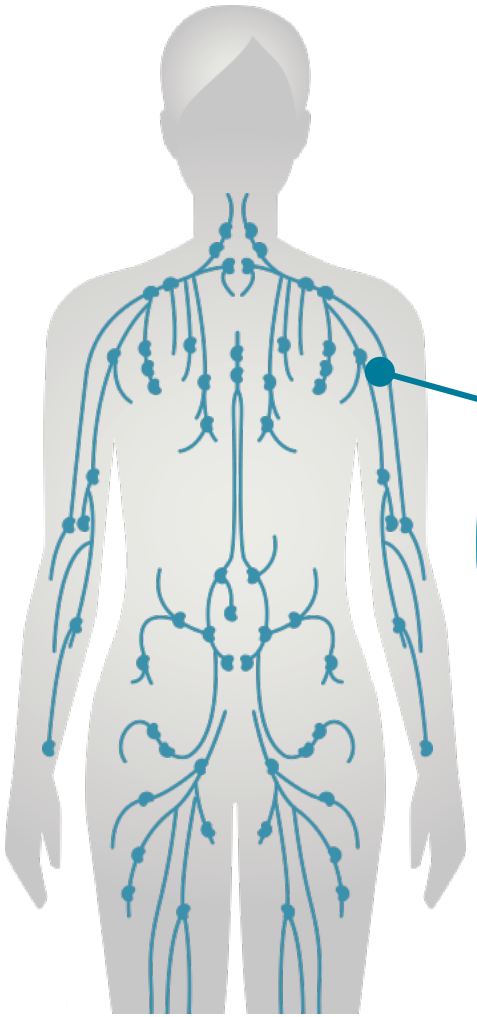
This presentation contains forward-looking statements as that term is defined in Section 27A of the Securities Act of 1933, as amended, Section 21E of the Securities Exchange Act of 1934, as amended, and the Private Securities Litigation Reform Act of 1995, known as the PSLRA. Statements in this presentation that are not purely historical are forward-looking statements. Such forward-looking statements include, among other things, statements regarding our planned clinical programs, including planned clinical trials and the potential of our product candidates, the unmet need and potential addressable market for our product candidates, the potential advantages of our product candidates over those of existing therapeutics and/or those of our competitors, and the advancement of and funding for our developmental programs generally. Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among others, our ability to raise the additional funding we will need to continue to pursue our business and product development plans; the inherent uncertainties associated with developing new products or technologies and operating as a development stage company, including in collaboration with other parties; our ability to develop, complete clinical trials for, obtain approvals for and commercialize any of our product candidates, including our ability to recruit and enroll patients in our studies; our ability to address the requests of the U.S. Food and Drug Administration or other regulatory agencies; competition in the industry in which we operate; delays or disruptions due to COVID-19 or geo-political issues, including the conflict in Ukraine; and market conditions. These forward-looking statements are made as of the date of this presentation, and we assume no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements, except as required by law. Prospective investors should consult all of the information set forth herein and should also refer to the risk factor disclosure set forth in the reports and other documents we file with the Securities and Exchange Commission (SEC) available at www.sec.gov, including without limitation the Company's Current Report on Form 8-K filed on June 2, 2023, and the Company's other filings from time to time with the SEC.

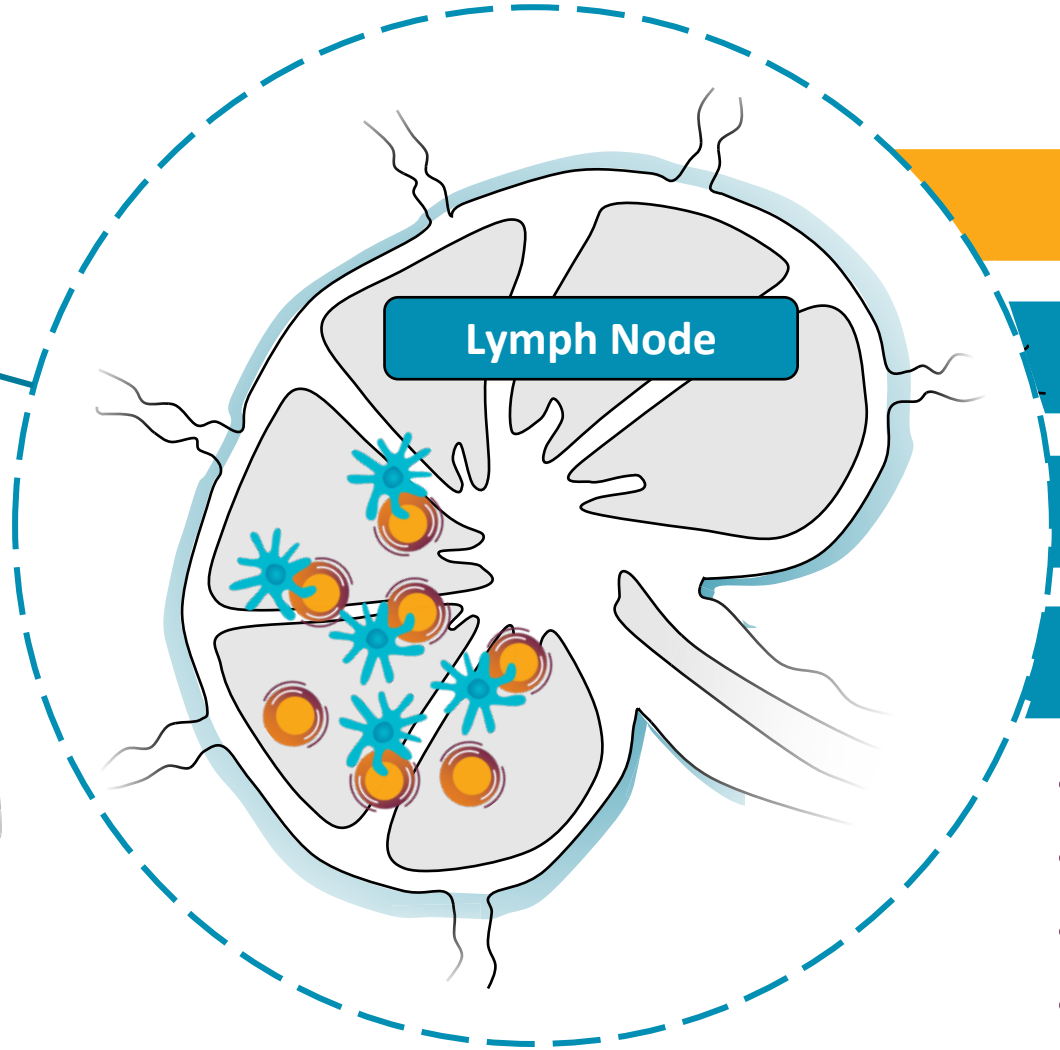
How can Lymph Node Targeting Orchestrate Therapeutic Anti-tumor Immunity?

1) **The AMP Platform**: Designing a system to target immune agents to **lymph nodes**

2) **ELI-002:** Boosting **Endogenous Anti-tumor Immunity** against **mKRAS**

Immune Orchestration in the Lymph Nodes





The Immune "School House"

Numerous Immune Cells

Response Coordination

APC : T Cell Interaction

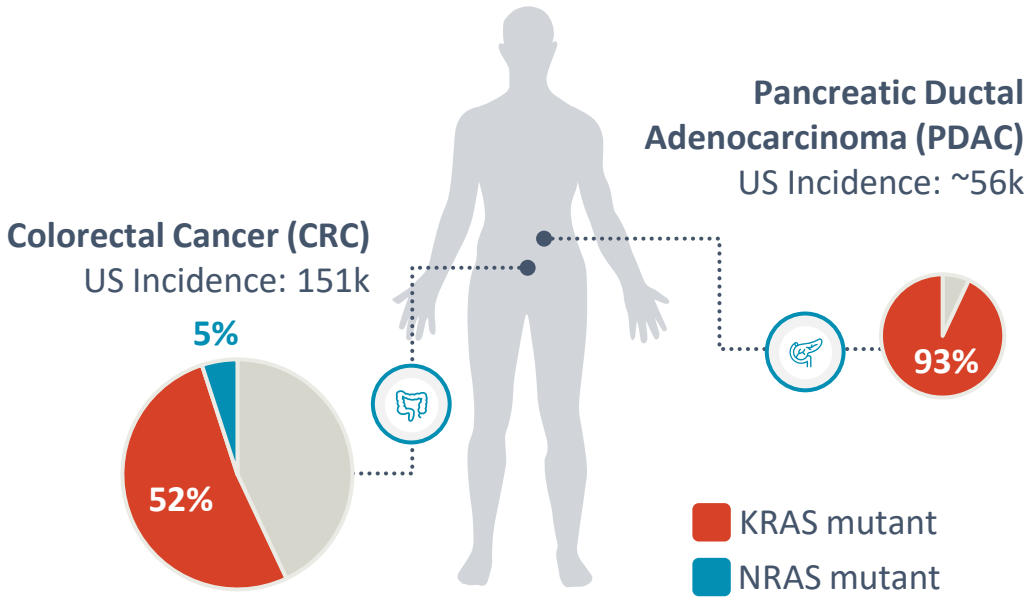
Boosting Endogenous Anti-tumor Immunity Targeting mKRAS

ELI-002: Design and Preclinical

Why Immunotherapy to Target mutant KRAS?

1 Mutant KRAS Drives 25% of Solid Human Cancers

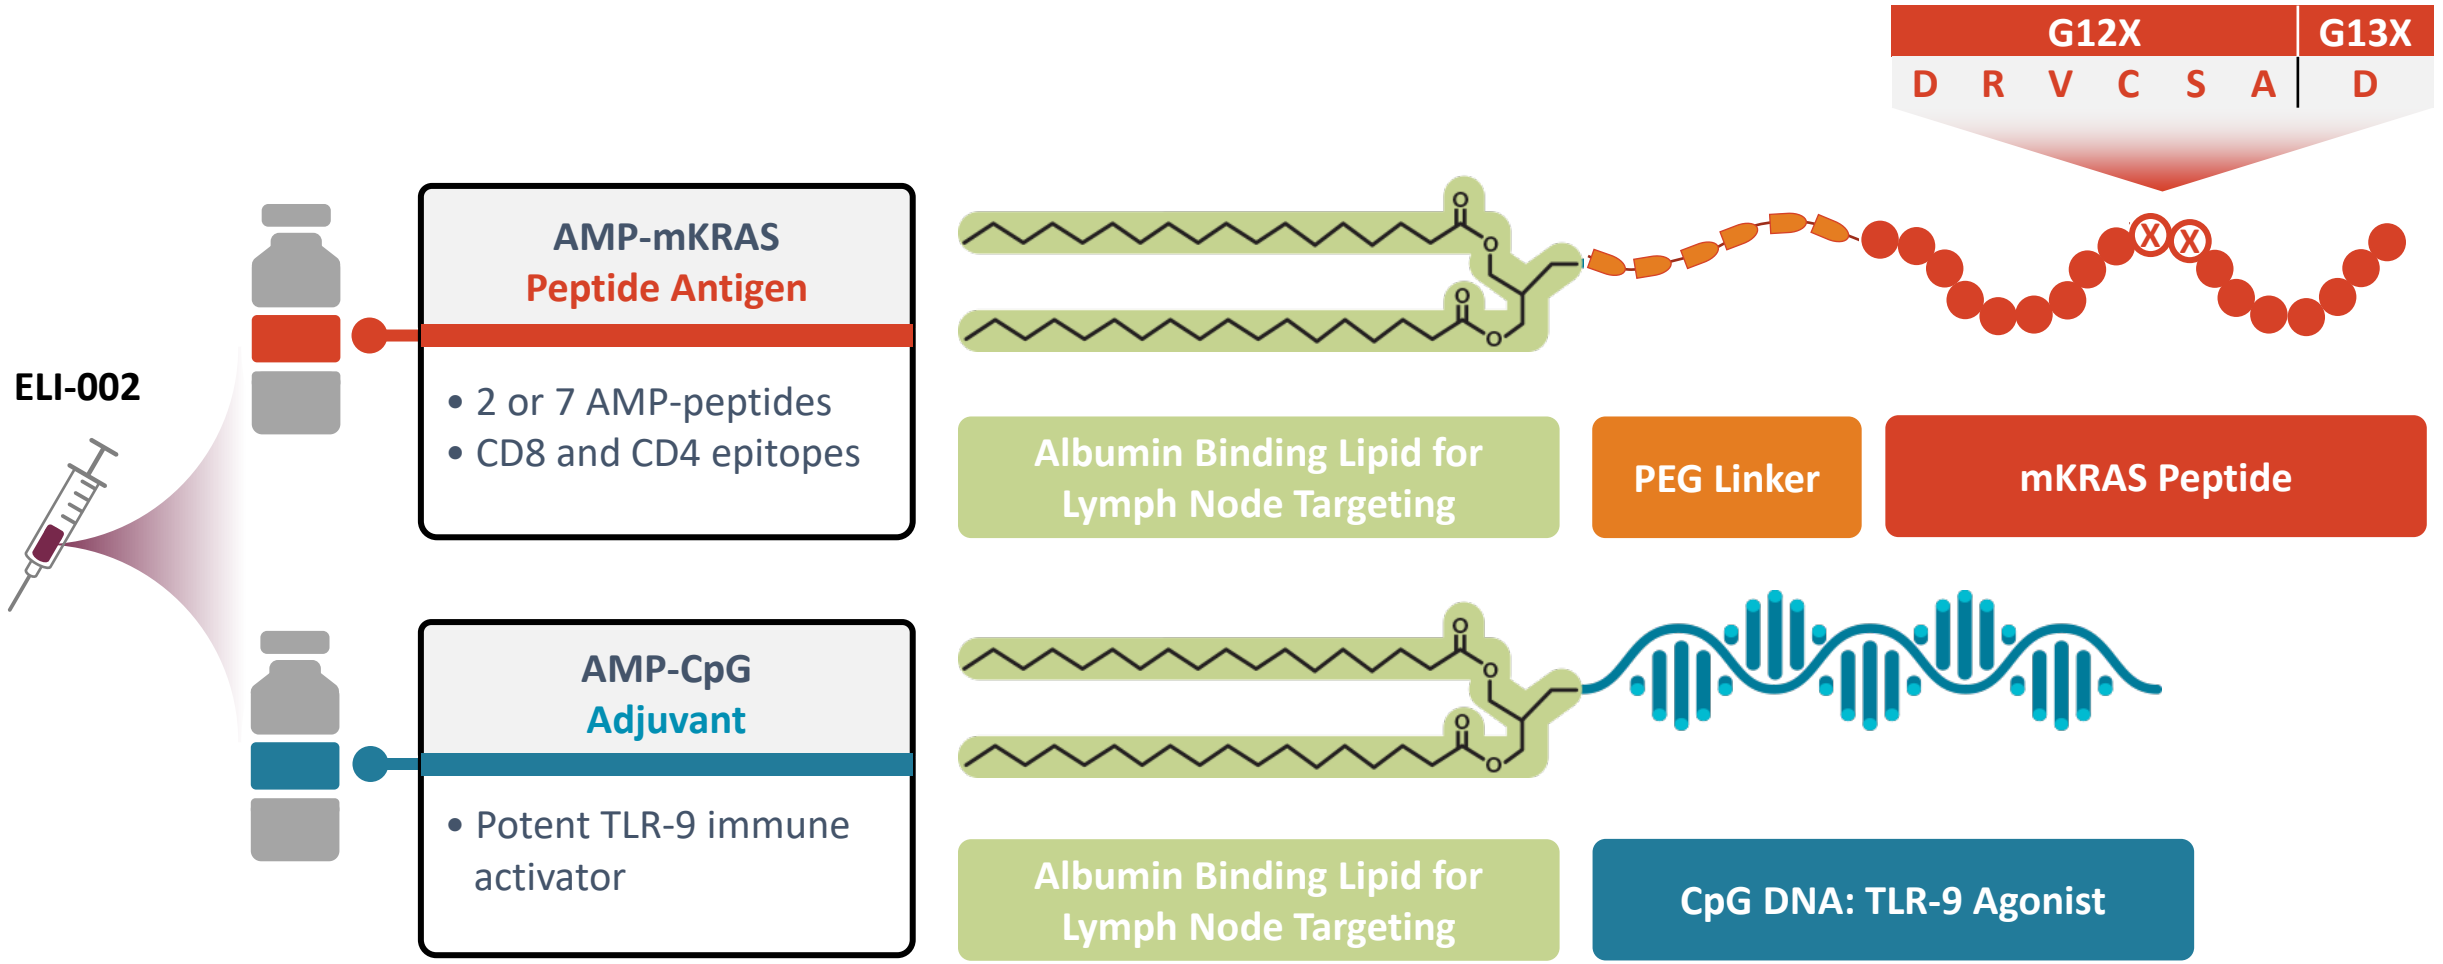
- **Prevalent** among numerous tumor types
- Overall **poor clinical prognosis**
- **Limited therapeutic options**



2 Mutant KRAS is a Promising Tumor Antigen

- **Truncal**: mutations occur early, expressed uniformly in tumor cells
- **Driver**: mKRAS signaling is required for tumor growth and survival
- **Highly prevalent**: involved in ~25% of solid tumors
- **Public neoantigen**: not centrally tolerized, cognate TCRs present in naïve repertoire
- **Broad HLA presentation**: potential off-the-shelf use in diverse patient population
- **Proven Clinical MOA**: mKRAS-specific T cells known to mediate anti-tumor efficacy
- **Multi-targeting potential**: broad recognition of mKRAS variants to prevent escape

ELI-002: a Lymph Node Targeted Therapeutic Vaccine for mKRAS-driven Solid Cancers



ELI-002 Efficiently Targets the Lymph Nodes to Induce Potent Functional mKRAS-specific T cell Responses

Boosting Endogenous Anti-tumor Immunity Targeting mKRAS

ELI-002: Clinical Update – AMPLIFY-201

AMPLIFY-201 Strategy

Technological and Clinical Innovation in Product Development

1 Technological Innovation: AMP Lymph Node Targeting

- **Smart trafficking to the lymph nodes** to generate enhanced immune responses
- Mutant KRAS peptides provide a **validated antigen** for application of the AMP platform
- Lymph node delivery of potent adjuvants **prevents systemic exposure to improve safety**

2 Clinical Innovation: Adjuvant Treatment of High Relapse-Risk

- Targeting surgically debulked tumors **enables T cells to address Minimal Residual Disease (MRD) to potentially eliminate** remaining tumor cells and protect against recurrence
- Activating the immune system **before loss of HLA expression** in the tumor microenvironment in a chemotherapy-free window of opportunity
- Treatment prior to advanced disease setting, **before onset of tumor immune resistance**
- **Tumor biomarkers (ctDNA, serum tumor antigen) are early predictors of disease control or recurrence**

AMPLIFY-201 Study Overview

Phase 1 dose-ranging study to assess safety and efficacy of ELI-002 2P adjuvant therapy

CLINICAL PROGRAM OVERVIEW: NCT04853017

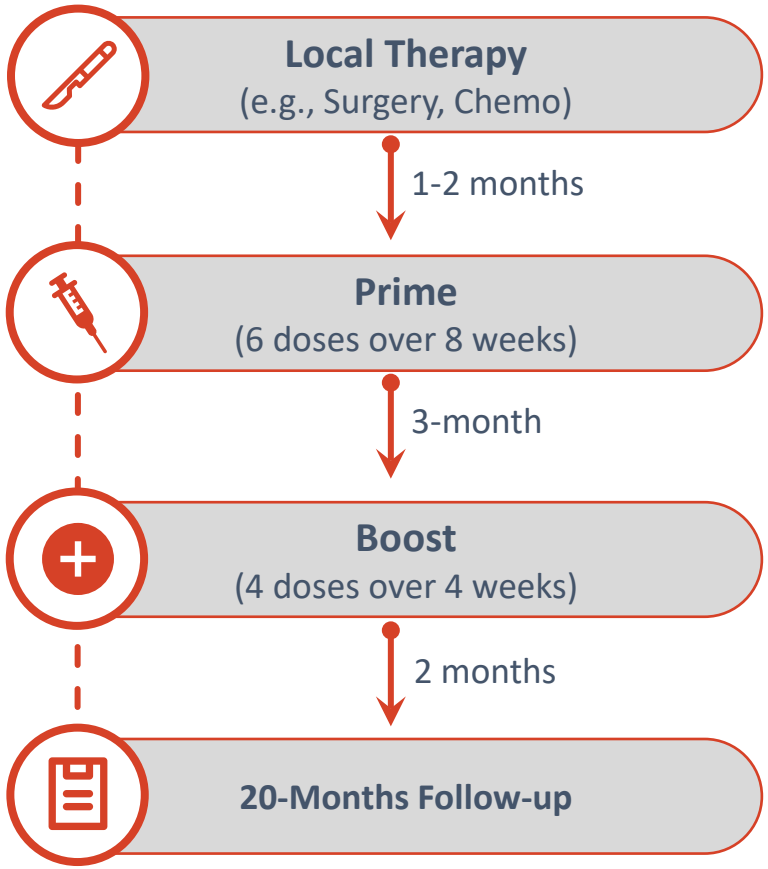
Key Criteria

- ✓ mKRAS G12D / R – aligned to 2 peptide formulation
- ✓ No metastatic disease after locoregional treatment
- ✓ No radiographic evidence of disease (NED)
- ✓ High risk of relapse (MRD+ ctDNA/serum biomarkers)

Baseline Characteristics

25 patients enrolled across 5 dose cohorts,
23 evaluable at database cutoff (4/25/2023)

- **Advanced:** 68% had stage III or oligometastatic resected stage IV disease
- **Pre-treated:** All received prior chemo and surgery, 28% had prior radiation



Basket Trial Enrollment

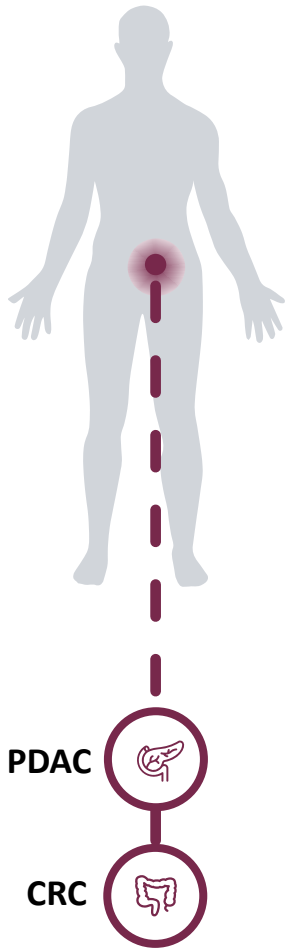
Pancreatic Ductal Adenocarcinoma (PDAC)	n=20
Colorectal Cancer (CRC)	n=5

Endpoints

- **Safety**
- **Maximum Tolerated Dose (MTD) or RP2D**
- ctDNA/serum biomarker change from baseline
- Immunological Responses
- Relapse Free Survival (RFS)

AMPLIFY-201 Study Design

Adjuvant treatment of patients with evident molecular disease following standard therapy



Prior Therapy

Locoregional Therapy:

- Surgery
- \+
- Neoadjuvant / Adjuvant Chemotherapy

Screening Period

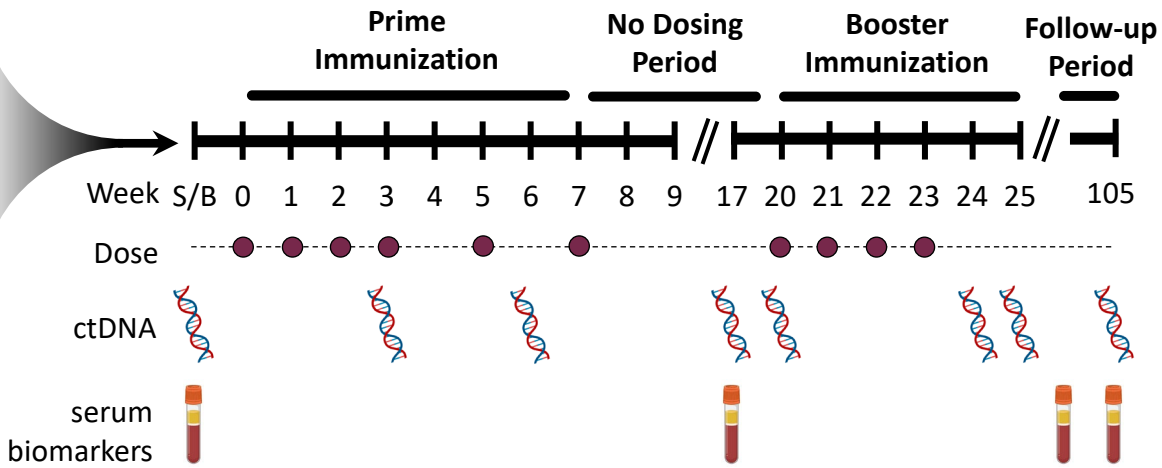
- **mKRAS+**: G12R+ or G12D+
- **No Evidence of Disease**: Imaging Negative
- **Minimal Residual Disease+**: ctDNA+ or serum biomarker+

SOC: Observation

PDAC: ctDNA+ RFS ~5 mo.

CRC: ctDNA+ RFS ~12 mo.

Amph-Peptides 2P 1.4 mg + 0.1, 0.5, 2.5, 5 or 10 mg Amph-CpG-7909



Cohort	Fixed Dose Amph-Peptides 2P	Ascending Dose Amph-CpG-7909
1	1.4 mg	0.1 mg
2	1.4 mg	0.5 mg
3	1.4 mg	2.5 mg
4	1.4 mg	5.0 mg
5	1.4 mg	10.0 mg

Groot, et al. **Clin Cancer Res** 2019; Lee, et al. **Annals Oncol** 2019; Kotani, et al. **Nature Med** 2023

20/25 pancreatic, 5/25 colorectal enrolled at database cutoff (4/25/2023)

AMPLIFY-201 Safety & Tolerability

ELI-002 was well tolerated at all dose levels, with no DLTs or SAEs

Safety and Tolerability

Very well Tolerated

No DLTs
No CRS
No Grade 3-4 related adverse events (AEs)

11/25 (44%) experienced Grade 1/2 AEs

3/25 (12%) experienced injection site reactions

No increase in adverse events was seen as Amph-CpG-7909 was dose escalated

	Cohort 1 (0.1 mg) n=3	Cohort 2 (0.5 mg) n=6	Cohort 3 (2.5 mg) n=5	Cohort 4 (5.0 mg) n=5	Cohort 5 (10.0 mg) n=6	Overall n=25
Adverse Event Term [a]						
Patients with Any Related TEAE, n (%)	1 (33.3)	3 (50.0)	2 (40.0)	3 (60.0)	2 (33.3)	11 (44.0)

Lymphadenopathy	0	0	0	0	1 (16.7)	1 (4.0)
Pruritus	0	0	0	1 (20.0)	0	1 (4.0)
Patient Summary						
KRAS Mutation	DDD	DDDDDD	DRDDD	DDRDD	RRDDRD	
Dose Limiting Toxicity	0	0	0	0	0	0
Biomarker Reduction / Clearance	2 (67)	5 (83)	3 (60)	4 (80)	3 (100) [b]	17 (77) [c]
T cell Response	2 (67)	5 (83)	4 (80)	5 (100)	4 (100) [d]	20 (87) [e]

TEAE: Treatment Emergent Adverse Event; a Preferred terms per the Medical Dictionary for Regulatory Activities, version 25.0; b Measured among 3 evaluable patients; c Measured among 22 evaluable patients; d Measured among 4 evaluable patients; e Measured among 23 evaluable patients

AMPLIFY-201 Tumor Biomarker Responses

Robust responses observed across tumor types and KRAS mutations with ELI-002 monotherapy

Tumor Biomarker Responses

Complete Biomarker Clearance

32%, 7/22

Biomarker Reduction

77%, 17/22

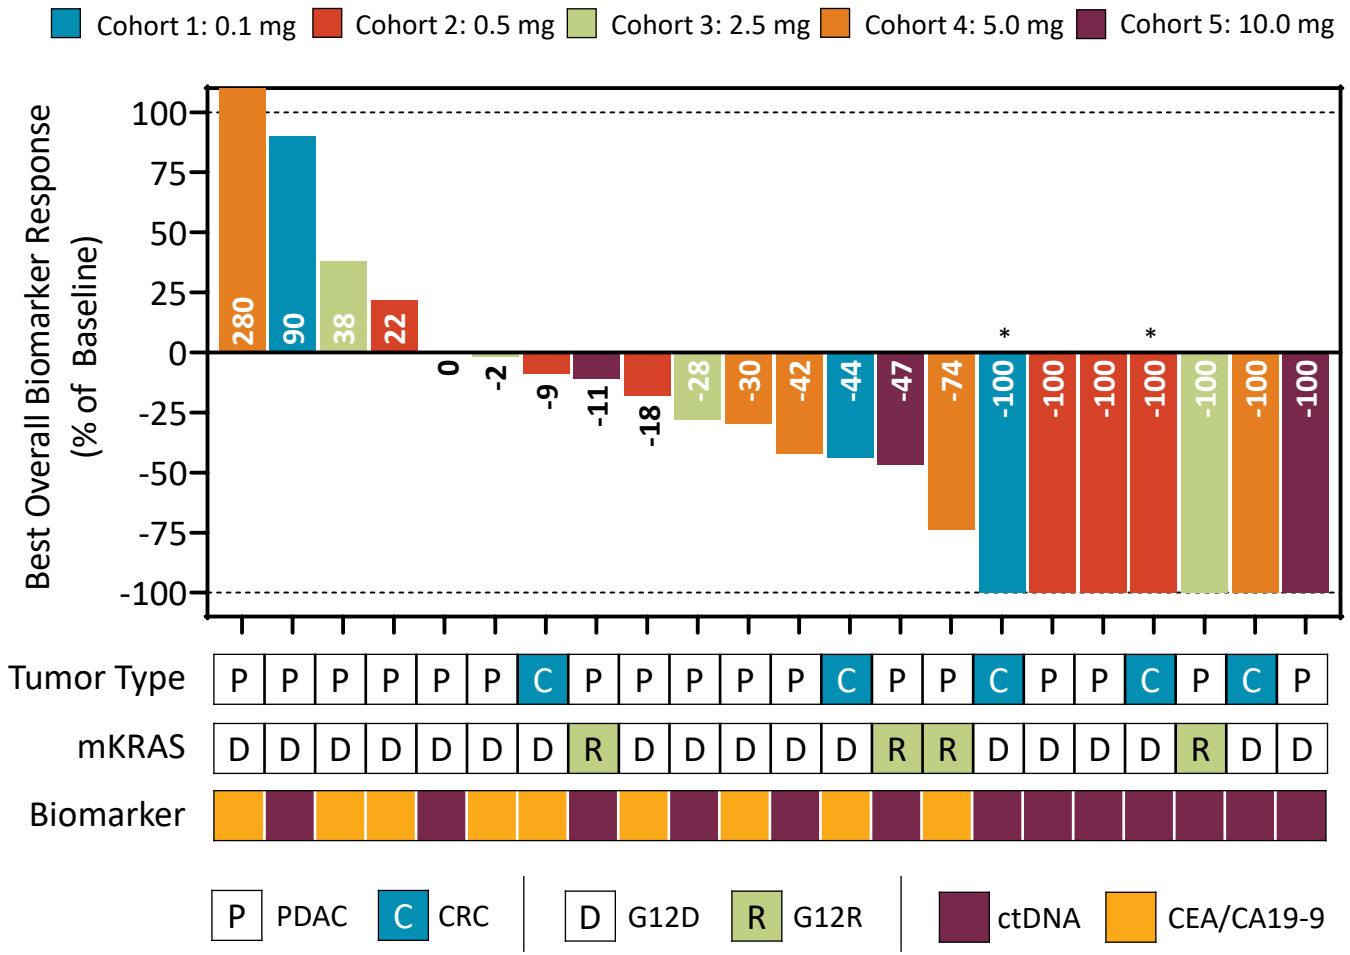
Breadth of Responses

PDAC & CRC

G12D & G12R

Diversity of HLA Background

AMPLIFY-201 Waterfall Plot: Biomarker Reduction/Clearance



* Patients biopsied, both exhibited T cell infiltration and continued study treatment

AMPLIFY-201 T Cell Responses

Vast majority of patients had robust T cell response across dose cohorts

mKRAS-specific T cell Response

87% of Patients with T cell Responses

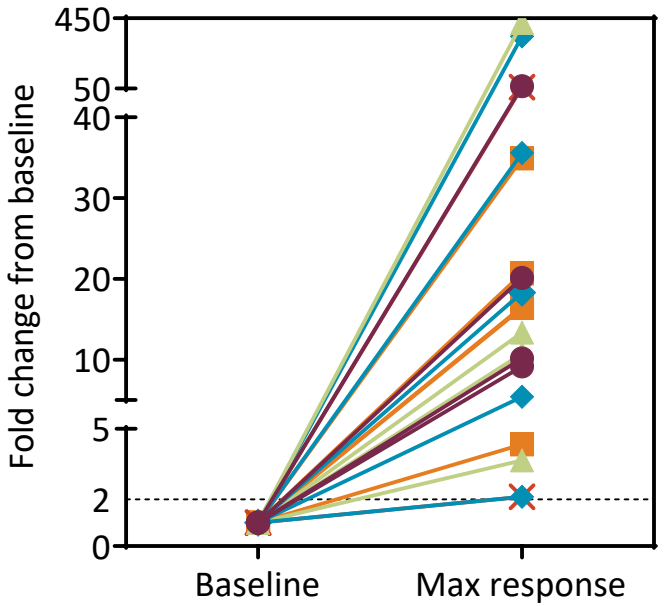
Responses measured directly *ex vivo* without *in vitro* expansion

Detected by ex vivo PBMC Fluorospot (IFNγ GrB) and ICS (IFNγ , TNFα, IL2)

56x Average Fold Increase over Baseline

100% Response in High-dose Cohorts

Direct Ex Vivo T Cell Response



Response per Dose Level

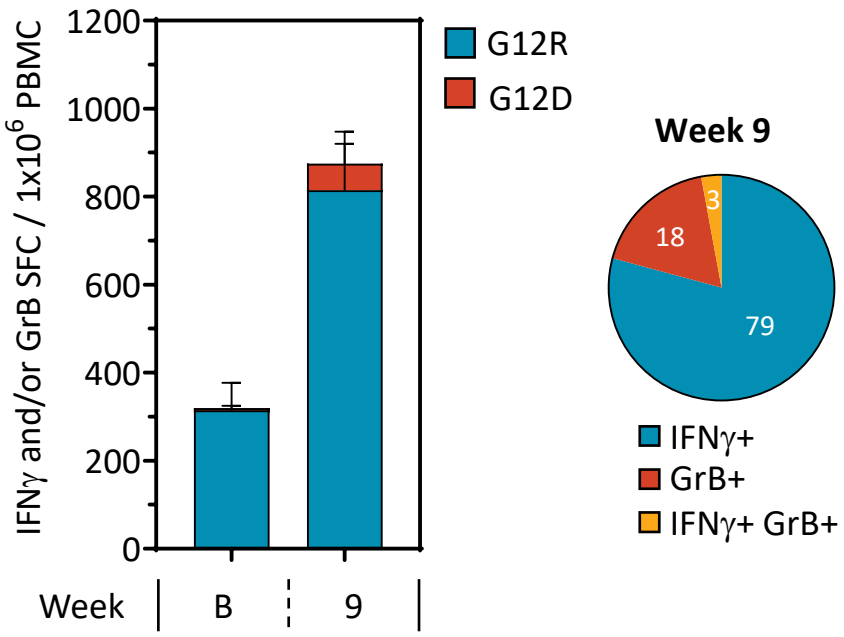
AMP-CpG Dose Level	*ex vivo* T cell response (n, %)	Average fold-change
0.1 mg	2/3 (67%)	30
0.5 mg	5/6 (83%)	82
2.5 mg	4/5 (80%)	113
5.0 mg	5/5 (100%)	19
10.0 mg	4/4 (100%)	26
Total	20/23 (87%)	56

Responses shown are best overall responses vs baseline for each patient at any timepoint during the assessment period

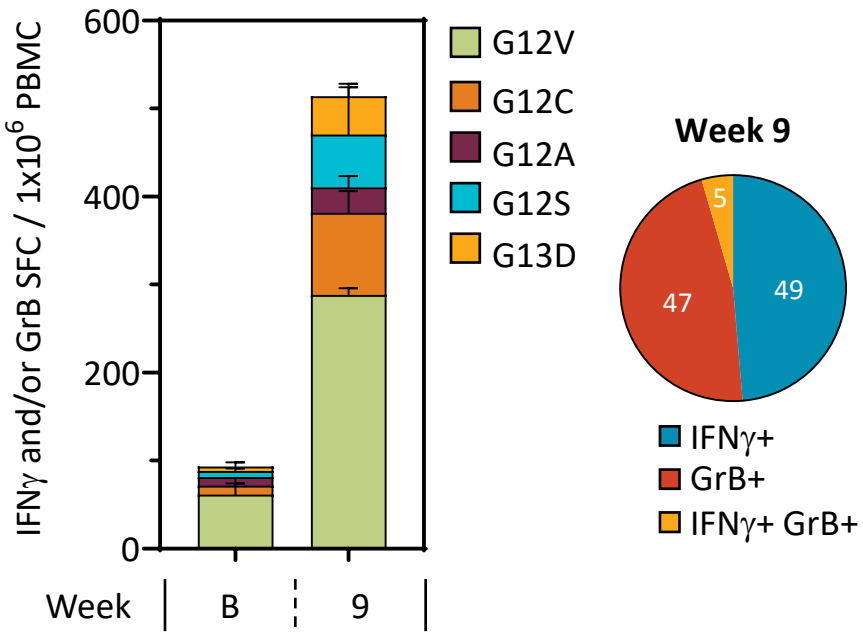
AMPLIFY-201 T Cell Responses

Direct Ex Vivo Assessment of Functional mKRAS-specific T Cell Responses in Patient 17

G12D / R Responses



G12V / C / A / S / G13D Responses



AMPLIFY-201 T Cell Tumor Infiltration

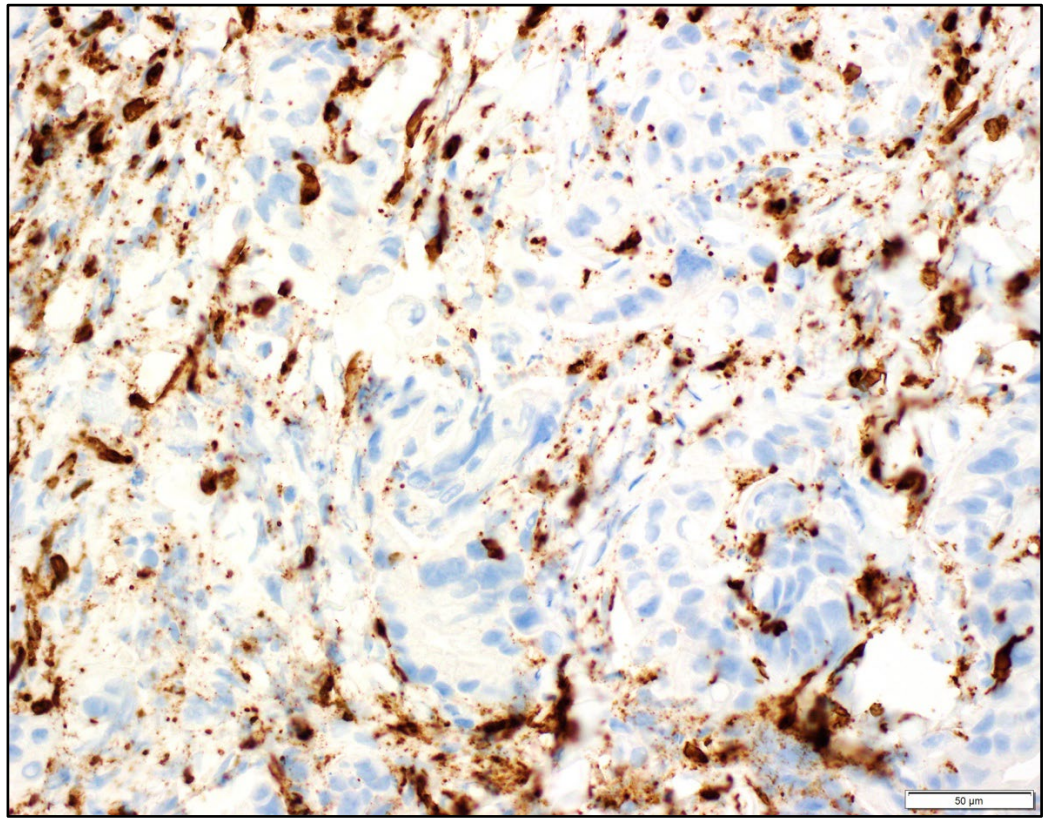
Preliminary clinical evidence shows dense T cell tumor infiltration following ELI-002 therapy

Tumor Infiltrating T cell Response

76 T cells / hpf
Subset of patients had tumor biopsy following observation of radiographic lesion on treatment
2-3 T cells / hpf expected in PDAC (↑ 29x increased)
Associated with ctDNA clearance in this patient
Subsequent CPI therapy led to clinical response

Tumor Biopsy CD3 Immunohistochemistry:

Pancreatic tumor, 2.5 mg dose level



Hpf: High-powered field; Ademmer, *et al.* **Clin Exp Immunol.** 1988; Ino, Y. *et al.* **Br J Cancer**. 2013

Lymph node-Targeted Therapeutic mKRAS-specific Cancer Vaccine ELI-002:

Safe and Well-tolerated

- Amphiphile Lymph Node Targeting can improve vaccine safety
- Unlike soluble TLR9 agonist CpG-7909, Amph-CpG-7909 showed no dose limiting toxicity
- RP2D determined at 10 mg Amph-CpG-7909: Favorable safety, tumor biomarker response, and T cell response

Novel adjuvant trial design using ctDNA / serum tumor biomarkers was feasible

- Goal: Minimize HLA loss, tumor-acquired immunosuppressive mechanisms; Maximize T cell : Tumor cell ratio
- Tumor biomarker data (ctDNA and serum tumor antigen) can provide early efficacy signal

A high proportion of ELI-002 2P patients had tumor biomarker reduction (77%), a subset achieved clearance (32%)

- Notable mKRAS-specific T cell responses induced, average 56-fold [range 2-423-fold] increase directly ex vivo
- T cell infiltration was 10 to 29-fold higher than literature in pancreatic tumors

ELI-002 7P trial NCT05726864 activated for KRAS G12D, G12V, G12R, G12C, G12A, G12S, G13D in PDAC, CRC, NSCLC
